Letter of Acceptance

Dear Author(s),

This letter is informed you that manuscript entitled,

“Drinking Water Depot Sanitation Hygiene”

By

Herniwanti

Hang Tuah University Pekanbaru, Indonesia

has accepted to be present on 1st International Conference Environmental Health, Socioeconomic, and Technology 2022 at August 10-11, 2022. Please continue to submit your full text to:

<https://conference.unisla.ac.id/index.php/icehst/submissions>

before July 15, 2022.

Before continuing to the next review process, please do your payment before May 30, 2022 to:

Bank Name : MANDIRI

Account holder's name : Rizky Rahadian Wicaksono

Account number : 1410013315122

City : Surabaya

Payment confirmation by attaching proof of payment transfer at Rizky Rahadian Wicaksono (Whatsapp : +62 822-5743-1757).

Sincerely,

Gading Wilda Aniriani, M.Si.

Head of ICEHST 2022

DRINKING WATER DEPOT SANITATION HYGIENE

¹*Herniwanti

¹ Hang Tuah University Pekanbaru, Indonesia, herniwanti@htp.ac.id, 082156553120

Background: The existence of refill drinking water depots continues to increase in line with the community's need for drinking water of good quality and safe for consumption. This is also an alternative option to meet the community's need for drinking water. Low prices do not guarantee the safety of their products because it will be a dangerous risk for consumers' health if the water depot entrepreneurs do not pay attention to sanitation hygiene.

Aim: To solve the problem of the sanitation hygiene of refill drinking water depot in Wonorejo Village which is one of the working areas of Garuda Health Center in Pekanbaru City, Riau, Indonesia.

Method: The research method is descriptive qualitative by observing 6 drinking water depots and filling out the self-assessment report for drinking water depots issued by the Directorate of Environmental Health of the Republic of Indonesia in 2017. The assessment consists of four categories (places, equipment, handlers, water quality).

Results: The results of the study stated that for the sanitation of the place and equipment for refill drinking water depots met the requirements but the handlers did not meet the 100% requirements, while the physical and chemical requirements of water were met but the biological requirements exceeded the quality standards. Sanitary hygiene do not meet the requirements, no ventilation at the depot and hand washing facilities equipped with running water and soap are not yet available. The production equipment does not meet the requirements because the equipped with a sand filter not available. Employee hygiene conditions do not use work clothes such as gloves, masker, shoes, and employees do not wash their hands before doing work, especially when handling containers and filling gallons.

Conclusion: The conclusion is the refill drinking water depot does not meet the requirements for hygiene, sanitation and health, referring to the Minister of Health Regulation No. 43 of 2014. It is recommended for owners of refill drinking water depots to repair aspects that do not meet the requirements. And it is suggested to the Pekanbaru City Health Office to conduct regular coaching and monitoring.

Keywords: drinking water, quality standard, sanitation hygiene, Pekanbaru, water depot
