BAB I

PENDAHULUAN

A. LATAR BELAKANG

Dalam lingkungan perawatan kesehatan, perawat memainkan peran yang sangat penting dalam memberikan perawatan sehari-hari kepada pasien. Namun, tidak jarang situasi darurat medis tiba-tiba terjadi di rumah sakit, klinik, atau berbagai setting perawatan lainnya. Dalam menghadapi situasi seperti itu, pengetahuan dan keterampilan dalam pertolongan pertama, seperti *Basic Life Support (BLS)* dan *Advanced Cardiac Life Support (ACLS)*, sangat penting untuk dimiliki oleh semua perawat.

BLS adalah serangkaian tindakan medis darurat yang dirancang untuk menjaga aliran oksigen ke otak dan organ vital lainnya ketika seseorang berhenti bernafas atau jantungnya berhenti berdetak. Perawat yang terlatih dalam BLS mampu memberikan bantuan segera dengan memberikan kompresi dada, ventilasi, dan manuver lainnya yang dapat memulihkan fungsi jantung dan pernapasan korban/pasien. Keterampilan BLS juga meliputi penggunaan alat bantu seperti defibrilator otomatis eksternal (AED) untuk mengembalikan detak jantung normal.

Sementara BLS adalah dasar pertolongan pertama, ACLS merupakan langkah selanjutnya yang melibatkan penanganan keadaan darurat yang lebih kompleks, terutama terkait masalah kardiovaskular. ACLS mencakup pengenalan dan penanganan aritmia jantung, pengelolaan gagal jantung akut, stroke, dan sejumlah kondisi medis serius lainnya. Keterampilan dalam ACLS memberikan perawat kemampuan untuk mengenali tanda-tanda vital yang bermasalah, mengambil keputusan cepat, dan melakukan tindakan yang sesuai untuk memulihkan stabilitas pasien.

Bidang perawatan kesehatan terus berkembang dengan kemajuan teknologi dan pengetahuan medis yang baru. Oleh karena itu, pelatihan BLS dan ACLS tidak hanya menjadi kewajiban, tetapi juga investasi dalam pengembangan profesional perawat. Perawat yang terlatih dalam BLS dan ACLS mampu memberikan perawatan yang lebih baik dan lebih aman bagi pasien dalam situasi darurat. Pelatihan ini juga meningkatkan kepercayaan diri perawat dalam menghadapi situasi medis yang mendesak.

Dalam dunia perawatan kesehatan, perawat adalah ujung tombak dalam memberikan perawatan dan merespons situasi darurat medis. Pelatihan BLS dan ACLS memberikan dasar

pengetahuan dan keterampilan yang kritis dalam menyelamatkan nyawa pasien. Dengan terus mengikuti perkembangan medis dan teknologi, perawat dapat memastikan bahwa mereka selalu siap untuk memberikan perawatan berkualitas tinggi, terutama dalam situasi yang penuh tekanan dan mendesak.

Dosen yang terlatih dalam BLS dan ACLS akan dapat membimbing mahasiswa keperawatan dengan lebih baik, mengajarkan praktik terbaru, dan mengajak mahasiswa berlatih simulasi kasus kegawatdaruratan. Oleh karena itu, perlunya pelatihan BLS dan ACLS for nurse bagi dosen keperawatan sebagai langkah penting dalam memajukan kualitas pendidikan dan praktik perawatan gawat darurat di Prodi S1 Ilmu Keperawatan dan Profesi Ners Fakultas Kesehatan Universitas Hang Tuah Pekanbaru..

Sesuai dengan Keputusan Menteri Pendidikan dan Kebudayaan Republik Indonesia Nomor 3/M/2021 tentang Indikator Kinerja Utama (IKU) Perguruan Tinggi Negeri dan Lembaga Layanan Pendidikan Tinggi di Lingkungan Kementerian Pendidikan dan Kebudayaan Tahun 2020, kegiatan Pengembangan Staf: Pelatihan *Advanced Cardiac Life Support (ACLS) For Nurse* Bagi Dosen ini untuk mendukung IKU 3 yaitu Meningkatkan kualitas dosen perguruan tinggi.

B. TUJAN KEGIATAN

Pelatihan ini memiliki beberapa tujuan meliputi:

1. Meningkatkan pengetahuan dan terampilan Dosen dalam BLS dan ACLS dan memungkinkan Dosen untuk mengintegrasikan pengetahuan praktis dalam pembelajaran keperawatan gawat darurat
2. Memperbarui pengetahuan dan keterampilan Dosen dalam pertolongan pertama dan penanganan kasus darurat kardiovaskular dengan panduan yang terstandar.
